## **21st Century U.S. Military Manuals: Opposing Force Worldwide Equipment Guide (WEG) Volume 3: Naval and Littoral Systems, Surface Vessels, Undersea, Submarines, Assault and Amphibious Craft**

U.S. Government, Department of Defense, U.S. Army

This Worldwide Equipment Guide (WEG) describes the spectrum of worldwide systems and system trends in the Contemporary Operational Environment (COE), serving as an authoritative "encyclopedia" of weapons around the world. This is the newest edition revised in 2011. This handbook is one of a series that describes a contemporary Opposing Force (OPFOR) for training U.S. Military commanders, staffs, and units. Together, these handbooks outline an OPFOR that can cover the entire spectrum of military and paramilitary capabilities against which the U.S. military must train to ensure success in any future conflict.

Volume Three covers Naval and Littoral Systems, Surface Vessels, Undersea, Submarines, Assault and Amphibious Craft.

Hydrofoil Craft for Littoral Operations - This technology is increasingly being used for boats and ships in both commercial and military sectors. It is an expensive propulsion upgrade, because of the mechanisms required, but the benefits are in open water speed. For ferries and medium range transport, shorter passage time can mean more passages and missions completed. For military applications, speed also decreases exposure time and permits quicker response time to engage targets. When in harbor areas or shallow water, foils are folded for conventional hull down propulsion. Wave action in high sea state open water will affect craft designed for coastal waters; as is true with any conventional designs.
