Geoenergy Modeling I: Geothermal Processes in Fractured Porous Media (SpringerBriefs in Energy)

Norbert Böttcher, Norihiro Watanabe, Uwe-Jens Görke, Olaf Kolditz

This introduction to geothermal modeling deals with flow and heat transport processes in porous and fractured media related to geothermal energy applications. Following background coverage of geothermal resources and utilization in several countries, the basics of continuum mechanics for heat transport processes, as well as numerical methods for solving underlying governing equations are discussed. This examination forms the theoretical basis for five included step-by-step OpenGeoSys exercises, highlighting the most important computational areas within geothermal resource utilization, including heat diffusion, heat advection in porous and fractured media, and heat convection. The book concludes with an outlook on practical follow-up contributions investigating the numerical simulation of shallow and deep geothermal systems.

From reader reviews:

Margaret Clayton:

Nowadays reading books be than want or need but also work as a life style. This reading addiction give you lot of advantages. The benefits you got of course the knowledge the particular information inside the book which improve your knowledge and information. The information you get based on what kind of book you read, if you want send more knowledge just go with knowledge books but if you want sense happy read one having theme for entertaining like comic or novel. Often the Geoenergy Modeling I: Geothermal Processes in Fractured Porous Media (SpringerBriefs in Energy) is kind of guide which is giving the reader unstable experience.

Travis McDonald:

Geoenergy Modeling I: Geothermal Processes in Fractured Porous Media (SpringerBriefs in Energy) can be one of your starter books that are good idea. We all recommend that straight away because this publication has good vocabulary which could increase your knowledge in words, easy to understand, bit entertaining but nonetheless delivering the information. The author giving his/her effort to set every word into satisfaction arrangement in writing Geoenergy Modeling I: Geothermal Processes in Fractured Porous Media (SpringerBriefs in Energy) although doesn't forget the main position, giving the reader the hottest and also based confirm resource details that maybe you can be among it. This great information can easily drawn you into brand new stage of crucial considering.

Stephen Beatty:

Is it you actually who having spare time then spend it whole day through watching television programs or just lying down on the bed? Do you need something totally new? This Geoenergy Modeling I: Geothermal Processes in Fractured Porous Media (SpringerBriefs in Energy) can be the reply, oh how comes? It's a book you know. You are therefore out of date, spending your spare time by reading in this new era is common not a geek activity. So what these publications have than the others?

Tia Rosario:

A lot of people said that they feel bored when they reading a guide. They are directly felt it when they get a half elements of the book. You can choose the actual book Geoenergy Modeling I: Geothermal Processes in Fractured Porous Media (SpringerBriefs in Energy) to make your current reading is interesting. Your personal skill of reading ability is developing when you like reading. Try to choose basic book to make you enjoy you just read it and mingle the opinion about book and studying especially. It is to be very first opinion for you to like to available a book and read it. Beside that the publication Geoenergy Modeling I: Geothermal Processes in Fractured Porous Media (SpringerBriefs in Energy) can to be your brand new friend when you're sense alone and confuse in what must you're doing of these time.
