Handbook of the Neuroscience of Aging

Handbook of the Neuroscience of Aging

A single volume of 85 articles, the Handbook of the Neurobiology of Aging is an authoritative selection of relevant chapters from the Encyclopedia of Neuroscience, the most comprehensive source of neuroscience information assembled to date (AP Oct 2008).

The study of neural aging is a central topic in neuroscience, neuropsychology and gerontology. Some well-known age-related neurological diseases include Parkinson's and Alzheimer's, but even more common are problems of aging which are not due to disease but to more subtle impairments in neurobiological systems, including impairments in vision, memory loss, muscle weakening, and loss of reproductive functions, changes in body weight, and sleeplessness. As the average age of our society increases, diseases of aging become more common and conditions associated with aging need more attention by doctors and researchers.

This book offers an overview of topics related to neurobiological impairments which are related to the aging brain and nervous system. Coverage ranges from animal models to human imaging, fundamentals of age-related neural changes and pathological neurodegeneration, and offers an overview of structural and functional changes at the molecular, systems, and cognitive levels. Key pathologies such as memory disorders, Alzheimer's, dementia, Down syndrome, Parkinson's, and stroke are discussed, as are cutting edge interventions such as cell replacement therapy and deep brain stimulation. There is no other current single-volume reference with such a comprehensive coverage and depth.

Authors selected are the internationally renowned experts for the particular topics on which they write, and the volume is richly illustrated with over 100 color figures. A collection of articles reviewing our fundamental knowledge of neural aging, the book provides an essential, affordable reference for scientists in all areas of Neuroscience, Neuropsychology and Gerontology.

- * The most comprehensive source of up-to-date data on the neurobiology of aging, review articles cover: normal, sensory and cognitive aging; neuroendocrine, structural and molecular factors; and fully address both pathology and intervention
- * Chapters represent an authoritative selection of relevant material from the most comprehensive source of information about neuroscience ever assembled, (Encyclopedia of Neuroscience), synthesizing information otherwise dispersed across a number of journal articles and book chapters, and saving researchers the time consuming process of finding and integrating this information themselves
- * Offering outstanding scholarship, each chapter is written by an expert in the topic area and over 20% of chapters feature international contributors, (representing 11 countries)
- * Provides more fully vetted expert knowledge than any existing work with broad appeal for the US, UK and Europe, accurately crediting the contributions to research in those regions
- * Fully explores various pathologies associated with the aging brain (Alzheimer's, dementia, Parkinson's, memory disorders, stroke, Down's syndrome, etc.)
- * Coverage of disorders and key interventions makes the volume relevant to clinicians as well as researchers

* Heavily illustrated with over 100 color figures

From reader reviews:

Steven Page:

As people who live in the particular modest era should be revise about what going on or facts even knowledge to make these keep up with the era and that is always change and progress. Some of you maybe will certainly update themselves by reading books. It is a good choice for you personally but the problems coming to you is you don't know which one you should start with. This Handbook of the Neuroscience of Aging is our recommendation to cause you to keep up with the world. Why, because book serves what you want and need in this era.

Joshua Molina:

A lot of people always spent all their free time to vacation as well as go to the outside with them loved ones or their friend. Did you know? Many a lot of people spent they will free time just watching TV, or playing video games all day long. If you want to try to find a new activity this is look different you can read the book. It is really fun for you personally. If you enjoy the book that you simply read you can spent all day long to reading a reserve. The book Handbook of the Neuroscience of Aging it doesn't matter what good to read. There are a lot of individuals who recommended this book. These people were enjoying reading this book. Should you did not have enough space to create this book you can buy the e-book. You can mOore easily to read this book out of your smart phone. The price is not too expensive but this book offers high quality.

Stephen Phelps:

As we know that book is vital thing to add our understanding for everything. By a e-book we can know everything we wish. A book is a pair of written, printed, illustrated or maybe blank sheet. Every year ended up being exactly added. This reserve Handbook of the Neuroscience of Aging was filled concerning science. Spend your spare time to add your knowledge about your scientific disciplines competence. Some people has diverse feel when they reading the book. If you know how big benefit of a book, you can sense enjoy to read a book. In the modern era like right now, many ways to get book you wanted.

Amy Quist:

Reading a e-book make you to get more knowledge from that. You can take knowledge and information originating from a book. Book is published or printed or descriptive from each source that will filled update of news. Within this modern era like at this point, many ways to get information are available for a person. From media social like newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Are you hip to spend your spare time to spread out your book? Or just in search of the Handbook of the Neuroscience of Aging when you required it?
